

Allocation Update

22-Nov-11

North/ South Splits

Request - Show Northern and Southern Southeast seperately; with and without DIPAC production.

Method -

Projects were assigned N-S to the extent possible with the current data.
This resulted in 98% of the value assigned to north or south, the remaining 2% is unknown because northern and southern projects are lumped together (some roe and earlier ADF&G projects).

Data -

ADF&G data 1994-2010, operator estimates for 2011, with 2010-11 preliminary
(C. Blair EX3 database format)

Data was filtered to show value for:

- 1 All programs
- 2 North (including DIPAC)
- 3 South
- 4 North (excluding DIPAC)
- 5 All programs (excluding DIPAC)
- 6 ***NEW*** NSRAA & SSRAA only

Results are shown as value by gear by year, 5-year rolling averages of percent by gear by year (table and graph for each).

CORRECTION 12.9.2011

It was discovered that NSRAA's gillnet and seine value estimates for 2011 were transposed.
The correction shifts \$1.277M from the gillnet value to the seine value.
